Aim: Introduce networking simulator tool and demonstrate various functionality

Step – 1: Drag and drop PC/Laptops and switches from the bottom left panel.

Step – 2 : Connect all PC/Laptop End User Devices to the switch using the Wire. This is how to connect a end user with a switch.

note:- using the first wire with the symbol of lighting the package tracer will automatically select the best suited wire for the connection.

Star topology: - Each Node is connected with a hub/Switch.

Bus topology: - All nodes are connected to a single line/Connection.

Mesh topology: - All nodes are connected to each other.

Conclusion:

Using Packet Tracer, I learned how different network devices like routers, switches, and computers are connected based on the network layout. The connections depend on the devices – for example, straight-through cables connect different devices (like a PC to a switch), while crossover cables connect similar ones (like switch to switch).
